

We at SkyWire Broadband are strongly and definitely opposed to the FCC Proposed Rule Making in CC Docket No. 02-33 (NPRM 02-33), and Further Proposed Rule Making in CC Docket No. 96-45 (FNPRM 96-45). One of the central reasons for the success of the Internet itself is its independence. Any further restrictions or requirements to service providers in the unlicensed frequencies would only serve to drive out nearly all providers from this fledgling market. As an organization that has seen very many companies enter and fail in the market sector of Internet service via unlicensed frequencies, we can tell you with a surety that few if any such companies will be able to stay in business with more required paperwork, regulations, or increased costs at all. Moreover, these regulations are only enforceable with very great difficulty, and even then not completely. Please decide against these proposed Rules for the purposes of better availability of Internet access and of the hope for success in this industry as a whole. Thank you.
